Product Summary

Ozone Taps: Ground breaking in bacteria control

Paterson in conjunction with aqualogic NT presents a new series of kitchen and basin mixers that combine ozone and water to produce ozone water straight from the tap. Ozone is the most powerful broad spectrum microbiological control agent and kills bacteria and

viruses on contact. Ozone (O_3) is a triatomic form of oxygen, H_2O_3 formulated by three oxygen atoms and is a naturally produced low density gas and colourless under normal temperature.

- Kills bacteria 3100 times faster than chlorine, and is safe to drink.
- Kills all common food pathogens, E-coli, Listeria, Shigella, Salmonella, Hepatitis A and Legionella.
- Stays active in open stored water for 20 minutes and kills bacteria and viruses on contact.
- Eliminates the use of hot water and conventional sanitisers.
- Eliminates Pesticides and destroys ethylene, the ageing hormone found on fruit and vegetables.
- Removes odours.
- Has full FDA approval for direct food contact applications.
- Applications are for any situation, residential or commercial where the control of bacteria is essential for health and food safety.
